*Tools:* Python, PostgreSQL, Prolog.

1. *Cyber-attribution:* Identifying cyber adversaries using argumentation and machine learning models (knowledge base: 10 million attacks).
2. *Proactive Cyber-threat Intelligence:* Built a system to crawl and parse the Darknet (markets and forums) to extract cyber threat intelligence including zero-day exploits using data mining and machine learning techniques (collecting 305 threats a week).
3. *Malware task identification:* Identifying the tasks that a piece of malware was designed to perform on the system (adversarial intent) using cognitive models.

#### Brain Engineering Lab (Dartmouth College)

June 2012 – July 2014

*Tools:* MATLAB, C++, OpenCV.

Learning representations for Object recognition and localization in image and video using biologically inspired algorithms.

#### SUNY Upstate medical University
