EDUCATION

Arizona State University, Tempe, Arizona USA

Ph.D. Computer Engineering (GPA: 4.0/4.0), August 2014 - Present

- Dissertation Topic: “Reasoning about Cyber Threat Actors”
- Advisor: Paulo Shakarian

Syracuse University, Syracuse, New York USA

M.S. Electrical Engineering, May 2012

University of Mumbai, Mumbai, India

B.S. Electronics and Telecommunication, June 2010

HONORS AND AWARDS

- IEEE/ACM International Symposium on Foundations of Open Source Intelligence and Security Informatics (FOSINT-SI), 2016 **Best Paper Award** for “Argumentation Models for Cyber Attribution”.
- “Systems and Methods for Data Driven Malware Task Identification” – Selected for TechConnect 2016 Innovation Showcase.
- Business Category - Most commercial potential winner (Idea: Weight Estimation from Anthropometric features), Medical Center of The Americas Foundation, 2014 (\$1000).
- Graduate Scholarship to pursue M.S. at Syracuse University (2010 - 2012)

ACADEMIC EXPERIENCE

Arizona State University, Tempe, Arizona USA

Graduate Research Assistant (CySIS Lab)

August, 2014 - present

Tools: *Python, PostgreSQL, Prolog, tcpflow.*

1. Proactive Cyber-threat Intelligence

- Developed an operational system for cyber threat intelligence gathering from darknet and deepnet sites.
- The system employs data mining and machine learning techniques to collect information from hacker forum discussions and marketplaces offering products and services focusing on malicious hacking.
- Currently, this system collects on average 305 high-quality cyber threat warnings each week. These threat warnings include information on newly developed malware and exploits.
- Future direction is to develop data analysis tools to gather meaningful insights from this data to aid security experts for better threat analysis.
- *Relevant publications:* [B-1, J-3, C-1]

2. Reasoning framework for Cyber-attribution

- Proposed a knowledge representation - machine learning (KR-ML) framework to reason about threat actors.

- The framework combines an argumentation model based on DeLP (Defeasible Logic Programming) and machine learning classifiers to evaluate evidence and reason about actors responsible for an attack.
- The framework was evaluated by building a dataset from the capture-the-flag event held at DEFCON – 10 million network attacks.
- Achieved higher precision than previously reported approaches (evaluated on the same dataset) that rely on machine learning classifiers alone—a jump from 37% to 64.5%.
- *Relevant publications:* [J-1, C-2, C-3, C-5, BC-1]

3. Malware task identification

- Developed a novel cognitive learning model to identify tasks (e.g. logging keystrokes, recording video, establishing remote access, etc.) that the malware was designed to perform.
- The proposed model was tested on different malware collections - including mutated and encrypted malware samples.
- The model outperformed standard machine learning approaches in identifying the tasks.
- *Relevant publications:* [J-2, C-4, C-6, C-7]

Dartmouth College, Hanover, New Hampshire USA

Research Associate ([Brain Engineering Lab](#))

June, 2012 - July, 2014

Tools: MATLAB, C++, OpenCV.

- Learning representations for Object recognition and localization from image and video datasets using biologically inspired algorithms.
- Proposed a supervised object recognition algorithm that achieves corresponding classification rates in comparison with standard machine learning approaches - at a fraction of the time and space costs.

SUNY Upstate Medical University, Syracuse, New York USA

Research Assistant

May, 2011 - June, 2012

Tools: MATLAB, C++.

Registering Multi-Spectral Retinal images to find features and points of interest to estimate the abundance of Oxygen saturation in the blood vessels in retinal images to diagnose retinal disorders.

PATENTS

- “Systems and Methods for Data Driven Malware Task Identification.”
Provisional: 62/182,006, Submitted (Non-provisional), 2016.
- “Intelligent darkweb crawling infrastructure for cyber threat intelligence collection.”
Provisional: 62/409,291, Licensed by Intellispyre Inc., 2016.

PUBLICATIONS

***B** - *Book*, ***J** - *Journal*, ***C** - *Conference*, ***BC** - *Book Chapter*

INVITED TALKS

- **Cyber-Deception and Attribution in Capture-the-Flag Exercises**
The International Information System Security Certification Consortium, Arizona, October, 2016.
Army Research Office’s Cyber Deception Workshop, Washington, July 2015.
- **Automatic identification of malware tasks**
Cactus-Con, Tempe, Arizona, March, 2015.

PROFESSIONAL EXPERIENCE

- Data Scientist**, Intellispyre Inc. **August, 2016 - present**
- Designing a system to store and mine data from darknet markets and forums using Python and PostgreSQL database.
 - Implementing learning models to classify data related to malicious hacking (from products on markets and topics on forums).
 - Developing data analysis tools to draw meaningful insights from the gathered data (including detection of 0-day exploits, identifying exploits targeting specific vulnerabilities, trend analytics in cyber threat landscape etc.) for customer specific requirements.
- Research Consultant**, SiteLock **June 2016 - August 2016**
- Analyzed large dataset of malicious web scripts (PHP/HTML) to generate features indicative of malicious activity.
 - Developed classification models to classify web scripts as malicious or not using the generated features in Python.
 - Visualized the performance of the trained model overtime and analyzed the classification errors for further improvement through Plotly dashboard.
 - **Achieved malicious web script detection rate of >90%.**

TECHNICAL SKILLS	<ul style="list-style-type: none"> • Machine Learning: Classification, regression, clustering, anomaly detection, feature engineering, online learning, scikit-learn, Weka, basic experience with deep learning (Theano and Caffe). • Programming Languages: Python, MATLAB, C++, Prolog, HTML, OpenCV, Theano, LaTeX, SVN, Git, Photoshop. Familiar with C, PHP, LISP, R, Caffe. • Databases: SQL, PostgreSQL, MYSQL, Familiar with Mongo DB. • Operating System: Windows, Linux, Mac OS X.
