EDUCATION

[Arizona State University](#), Tempe, Arizona USA

Ph.D. Computer Engineering (GPA: 4.0/4.0), May 2018

- Dissertation Topic: “Reasoning about Cyber Threat Actors”
- Advisor: Paulo Shakarian

[Syracuse University](#), Syracuse, New York USA

M.S. Electrical Engineering, May 2012

[University of Mumbai](#), Mumbai, India

B.S. Electronics and Telecommunication, June 2010

HONORS AND AWARDS

- IEEE International Conference on Data Intelligence and Security (ICDIS), 2018 **Best Poster Award** for “DARKMENTION: Reasoning about enterprise-related external cyber threats using a rule-learning approach”.
- IEEE/ACM International Symposium on Foundations of Open Source Intelligence and Security Informatics (FOSINT-SI), 2016 **Best Paper Award** for “Argumentation Models for Cyber Attribution”.
- “Systems and Methods for Data Driven Malware Task Identification” – Selected for TechConnect 2016 Innovation Showcase.
- Business Category - Most commercial potential winner (Idea: Weight Estimation from Anthropometric features), Medical Center of The Americas Foundation, 2014 (\$1000).
- Graduate Scholarship to pursue M.S. at Syracuse University (2010 - 2012)

ACADEMIC EXPERIENCE

[Arizona State University](#), Tempe, Arizona USA

Graduate Research Assistant (CySIS Lab)

August 2014 - May 2018

Tools: Python, Spark, PostgreSQL, Prolog, tcpflow.

1. Proactive Cyber-threat Intelligence

- Developed an operational system for cyber threat intelligence gathering from darknet and deepnet sites.
- The system employs data mining and machine learning techniques to collect information from hacker forum discussions and marketplaces offering products and services focusing on malicious hacking.
- Currently, this system collects high-quality cyber threat warnings each week. These threat warnings include information on newly developed malware and exploits.
- Developed data analysis tools to identify At-risk systems, vulnerabilities likely to be exploited by threat actors, understand the social dynamics in hacker communities.
- *Relevant publications:* [B-1, J-1, C-10, C-9, C-7]

2. Reasoning framework for Cyber-attribution

- Proposed a knowledge representation - machine learning (KR-ML) framework to reason about threat actors.

- The framework combines an argumentation model based on DeLP (Defeasible Logic Programming) and machine learning classifiers to evaluate evidence and reason about actors responsible for an attack.
- The framework was evaluated by building a dataset from the capture-the-flag event held at DEFCON – 10 million network attacks.
- Achieved higher accuracy than previously reported approaches (evaluated on the same dataset) that rely on machine learning classifiers alone—a jump from 37% to 64.5%.
- *Relevant publications:* [B-2, J-3, C-3, C-5, C-6, C-8, BC-1]

3. Malware task identification

- Developed a novel cognitive learning model to identify tasks (e.g. logging keystrokes, recording video, establishing remote access, etc.) that the malware was designed to perform.
- The proposed model was tested on different malware collections - including mutated and encrypted malware samples.
- The model outperformed standard machine learning approaches in identifying the tasks.
- *Relevant publications:* [J-2, C-1, C-2, C-4]

Dartmouth College, Hanover, New Hampshire USA

Research Associate ([Brain Engineering Lab](#))

June 2012 - July 2014

Tools: MATLAB, C++, OpenCV.

- Learning representations for Object recognition and localization from image and video datasets using biologically inspired algorithms.
- Proposed a supervised object recognition algorithm that achieves corresponding classification rates in comparison with standard machine learning approaches - at a fraction of the time and space costs.

SUNY Upstate Medical University, Syracuse, New York USA

Research Assistant

May 2011 - June 2012

Tools: MATLAB, C++.

Registering Multi-Spectral Retinal images to find features and points of interest to estimate the abundance of Oxygen saturation in the blood vessels in retinal images to diagnose retinal disorders.

PATENTS

- “Systems and Methods for Third Party Risk Assessment.” U.S. Provisional Patent: 62/668,871, 2018.
- “Systems and Methods for predicting which software vulnerabilities will be exploited by malicious hackers to prioritize for Patching.” U.S. Provisional Patent: 62/581,123, 2017.
- “Systems and Methods for Data Driven Malware Task Identification.” U.S. Patent: 20,160,371,490 (Submitted), 2016.
- “Intelligent darkweb crawling infrastructure for cyber threat intelligence collection.” U.S. Provisional Patent: 62/409,291, Licensed by CYR3CON, 2016.

INVITED TALKS

- **Malicious Markets and Forums**
Understanding the Dark Web and its Implications for Policy, Virginia Techs Executive Briefing Center, Arlington, VA, May 2018.
- **Cyber-Deception and Attribution in Capture-the-Flag Exercises**
The International Information System Security Certification Consortium (ISC2), Phoenix chapter, October, 2016.
Army Research Office’s Cyber Deception Workshop, Washington, July 2015.

- **Automatic identification of malware tasks**

Cactus-Con, Tempe, Arizona, March, 2015.

PROFESSIONAL
EXPERIENCE

Member of Technical Staff (MTS 1), PayPal

Starting June 2018

- Develop and maintain code to enhance information security capabilities.
- Create and maintain infrastructure to support information security capabilities.
- Implement machine learning capabilities in new and existing information security products.
- Work with information security teams to integrate existing or develop new capabilities.
- Create documentation and training for new and existing information security capabilities.
- Interpret and solve problems when a user or an automated monitoring system alerts them that a problem exists.

Data Scientist, Cyber Reconnaissance Inc. (CYR3CON)

August 2016 - May 2018

Leading a team of developers and analysts to built tools / products for security applications. In particular,

- Building a data collection system for Darkweb markets and forums - to collect information regarding discussions and products relating to hacking activities.
- Using the gathered threat intelligence to build learning models for predicting likelihood of exploitation of a vulnerability (vulnerability prioritization).
- Providing intelligence on Mobile threats for both Android and iOS applications.
- Active Threat Assessment on client systems.
- Named-entity recognition (to determine vulnerable software) using RNN/LSTM seq2seq models.
- Developed classification models to classify web scripts as malicious. Visualized the performance of the trained model overtime and analyzed the classification errors for further improvement through Plotly dashboard. Achieved malicious script detection rate of 90
- Assist with the expansion of CYR3CON future product features as well as the management and development of growing community of users, guiding/assisting them in trials.

Security Automation Intern (Data Science), PayPal

May 2017 - August 2017

- Analyzed user login activity using Akamai logs and enriched it with other data feeds such as threat intelligence, merchant data, credential dumps.
- Implemented operational Anomaly detection models to detect Account Takeover (ATO) attacks to raise alerts for automated mitigation.
- Visualized ATO attacks in real time on a dashboard in Splunk.

TECHNICAL SKILLS

- **Machine Learning:** Classification, regression, clustering, anomaly detection, feature engineering, online learning, Experience with deep learning.
- **Programming Languages:** Python, MATLAB, C++, Prolog, HTML, LaTeX. Familiar with C, R.
- **Libraries:** scikit-learn, Weka, Pandas, Elasticsearch, Theano, Caffe.
- **Databases:** SQL, PostgreSQL, MongoDB.
- **Operating System:** Windows, Linux, Mac OS X.
- **Tools:** Eclipse, MS Visual Studio, PyCharm.
- **Big Data and Cloud:** Splunk, Familiar with Big Data Processing Platforms: Hadoop, Spark and Cloud tools: Amazon S3.
